

Prompt for ChatGPT

You are an expert website strategist, UI/UX designer, conversion copywriter and brand consultant.

I will provide you with the Google Business Profile link of a business that currently does not have a professional website, or whose existing website needs improvement.

Google Business Profile Link:
[PASTE GOOGLE MAPS PROFILE LINK HERE]

Your task is to thoroughly research and analyze this business using all publicly available information.

Start by studying:

- * Business name
- * Business category
- * Location and service area
- * Products or services
- * Google rating
- * Customer reviews
- * Business photos
- * Opening hours
- * Contact details
- * Unique selling points
- * Customer compliments
- * Common customer concerns
- * Nearby competitors
- * Target audience
- * Local market positioning

Do not invent business information. Clearly mark any detail that cannot be verified and use editable placeholder content wherever necessary.

After completing the research, prepare a complete website strategy for this business.

Your response must contain the following sections:

1. BUSINESS ANALYSIS

Explain:

- * What the business offers
- * Who its ideal customers are
- * What makes the business different
- * What customers appreciate most
- * Problems the website should solve
- * The primary conversion goal of the website

2. WEBSITE CONCEPT

Recommend the most suitable website style for the business.

Define:

- * Overall visual direction
- * Brand personality
- * Website mood
- * Modern, premium, playful, elegant, local, professional or luxury positioning
- * Whether the design should be minimal, image-focused, content-focused or conversion-focused

Avoid using the same generic design style for every business. The concept must be specifically designed for this particular industry and business.

3. COLOR PALETTE

Recommend a complete color palette containing:

- * Primary color
- * Secondary color
- * Accent color
- * Background color
- * Surface/card color
- * Main text color
- * Muted text color
- * Button colors
- * Hover colors

Provide HEX codes and explain why these colors are appropriate for the business.

Ensure accessible contrast between text and backgrounds.

4. TYPOGRAPHY

Recommend:

- * Heading font
- * Body font
- * Button font style
- * Suitable font weights
- * Recommended heading sizes
- * Recommended paragraph sizes

Use freely available web fonts, preferably Google Fonts.

5. LOGO DIRECTION

Based on the business name and category, suggest:

- * Logo style
- * Icon concept
- * Typography style
- * Suitable colors
- * Horizontal logo variation
- * Square favicon or app-icon variation

Do not copy any existing company logo. If the business already has an identifiable logo, recommend preserving its recognition while professionally refining it.

6. WEBSITE STRUCTURE

Recommend the required pages, such as:

- * Home
- * About
- * Services or Menu
- * Gallery
- * Reviews
- * Frequently Asked Questions
- * Contact

- * Location
- * Booking or Request a Quote

Only include pages that make sense for this business.

7. HOMEPAGE STRUCTURE

Create a detailed homepage section order.

For every section provide:

- * Section purpose
- * Suggested heading
- * Supporting text
- * Call-to-action
- * Layout direction
- * Visual or image recommendation

The homepage may include:

- * Announcement bar
- * Navigation
- * Hero section
- * Trust indicators
- * Main services
- * Why choose us
- * Business introduction
- * Process
- * Gallery
- * Google review highlights
- * Statistics
- * Service area
- * FAQ
- * Final call-to-action
- * Contact information
- * Footer

Adapt these sections according to the business instead of including unnecessary sections.

8. WEBSITE COPY

Write conversion-focused draft copy for:

- * Hero heading
- * Hero supporting paragraph
- * Primary call-to-action
- * Secondary call-to-action
- * About section
- * Service descriptions
- * Why choose us section
- * Review section heading
- * FAQ section
- * Final call-to-action

The copy must sound natural and specific. Avoid exaggerated or unverifiable claims such as “the best,” “number one,” or fabricated statistics.

9. IMAGE DIRECTION

Explain what type of images should be used throughout the website.

Recommend:

- * Hero image style
- * Service images
- * Gallery images
- * Team or owner images
- * Local area imagery
- * Image orientation
- * Lighting style
- * Photography mood
- * Suitable stock-image search keywords

Prioritize authentic business photos where available. Do not use copyrighted Google Business Profile photos without permission. For the initial demo, use licensed stock images or clearly labelled placeholders.

10. ANIMATIONS AND INTERACTIONS

Recommend animations suitable for this business.

These may include:

- * Smooth scrolling
- * Text reveal
- * Image reveal
- * Subtle parallax
- * Button hover interactions
- * Card hover effects
- * Animated statistics
- * Gallery transitions
- * Sticky navigation
- * Mobile menu animation
- * Page transitions

Animations must feel smooth and premium without making the website slow, distracting or difficult to use.

Respect prefers-reduced-motion accessibility settings.

11. MOBILE EXPERIENCE

Explain how the website should behave on mobile.

Include:

- * Mobile navigation
- * Sticky call or WhatsApp button
- * Click-to-call functionality
- * Responsive typography
- * Touch-friendly buttons
- * Mobile gallery layout
- * Performance optimization

12. LOCAL SEO STRATEGY

Recommend:

- * Primary local keywords
- * Page title

- * Meta description
- * Heading structure
- * LocalBusiness schema requirements
- * Address and service-area placement
- * Google Maps integration
- * Review placement
- * Contact information consistency
- * Suggested image alt text

Do not claim guaranteed Google rankings.

13. CONVERSION FEATURES

Recommend relevant features such as:

- * Phone call button
- * WhatsApp enquiry
- * Appointment booking
- * Table reservation
- * Quote request form
- * Directions button
- * Lead form
- * Product enquiry
- * Menu download
- * Google review button

Only recommend features relevant to the business.

14. FINAL EMERGENT PROMPT

Finally, convert the complete analysis into one comprehensive, standalone prompt for Emergent.

The Emergent prompt must instruct it to:

- * Design and develop the complete responsive website
- * Follow the recommended branding and color palette
- * Use the recommended typography
- * Create all required pages and sections
- * Add polished animations and interactions
- * Write realistic editable content
- * Use licensed placeholder or stock imagery
- * Avoid fabricating reviews, awards, statistics or business information
- * Optimize for desktop, tablet and mobile
- * Add basic local SEO
- * Add accessible navigation and forms
- * Optimize loading performance
- * Create reusable components
- * Add proper hover, loading, success and error states
- * Include clear calls to action
- * Make phone numbers and addresses editable
- * Add Google Maps and contact integration placeholders
- * Produce a visually impressive, client-presentable demo

The final Emergent prompt must be detailed enough to be pasted directly into Emergent without requiring additional explanation.

Hello, maine apka Google business page visit kiya tha aur apke liye ek website banai hai.

Website Link: [website-url]

Apke business ke hisab se fully customisable website hai. Agar pasand ho to main apko ye website Rs.10,000 mein de sakta hun jo ki one time development price hai.

I will be waiting for your response.

Best regards,
[your-name],
[your-website-link]
